EXECUTIVE SUMMARY

A brief overview (1/2 to 1 page) summarizing the internship experience. Include:

• Purpose of the internship (e.g., *This report documents my 8-week internship at TechSolutions Inc., completed as part of the B.Sc. Computer Engineering program at the CUI. The internship focused on software development practices in an industry setting*)

• Key tasks performed (e.g., *Development of a student management system using Python/ Django/Implementation of REST APIs for mobile applications/ Database design and optimization for web applications/ Participation in agile development processes*)

• Major learnings and challenges (e.g., *optimizing algorithms, troubleshooting systems, Challenges faced included debugging complex systems and meeting tight deadlines, which were overcome through systematic problem-solving and teamwork*)

• Link to UN SDGs (e.g., *The internship contributed SDG 9 (Industry, Innovation and Infrastructure) by implementing innovative technical solutions*.)

• Main conclusions and recommendations

INTRODUCTION

Concept and Objectives of the Internship

Briefly explain the concept of a computer engineering internship (*e.g., hands-on learning in tech projects*). Outline personal/academic goals (e.g*., applying coding skills to real projects, learning system design*). Describe what you hoped to achieve (e.g., *improving programming skills, contributing to a tech solution*).

Methodology

Methodology is just how you gathered information and completed my internship work -like explaining the steps you took to learn and write about your internship. Think of it as a simple guide for others to follow your process.

- Learning the Basics: (e.g., *Read company documents and manuals, studied online resources and tutorials, asked questions to my supervisors and team members*)
- Mention tools you used (e.g., *Coding tools: Visual Studio Code, GitHub; Note-taking: OneNote, Google Docs; Task tracking: Trello, Excel spreadsheets*)
- Work Process (e.g., *Broke big tasks into smaller steps, Tested my code frequently, Asked for feedback regularly, Kept daily notes of what I learned*).
- Writing This Report (e.g*., Reviewed my daily notes and tasks, Organized information by topics, Used simple language to explain technical concepts*)

Scope

Mention focus areas (e.g., *software coding, hardware setup) due to time limits (e.g., 6-8 weeks)*).

OVERVIEW OF THE ORGANIZATION

Background

Brief history, mission, vision, core business areas (e.g., *IT services, tech products*), departments/divisions (e.g., *software team, IT support*).

Key Products/Services and Hierarchy

Describe main offerings (e.g., *apps, tech devices*) and organizational structure (*include organogram if available, focusing on tech teams*).

DESCRIPTION OF THE INTERNSHIP ROLE

Tasks Performed

Include major duties (e.g., writing code, setting up networks) and assignments completed (e.g., *fixing bugs, designing databases*). Describe departments worked in (e.g., *software development*).

Link to PLO 1: Demonstrates application of fundamental engineering knowledge to analyze problems and design solutions.

Writing code

Setting up networks

Fixing bugs

Designing databases

Learning Experience

Share skills and knowledge gained (e.g., *coding in Python, fixing hardware issues*). Reflect on how school learning (e.g., algorithms, computer basics) helped in real tasks.

Link to PLO 11: Shows commitment to learning new tech skills and adapting to tools.

Python programming

Hardware troubleshooting

Applying algorithm knowledge

Challenges

Detail major challenges (e.g., *slow code, hardware glitches*) and how you solved them (e.g., *using help guides, testing fixes*).

Link to PLO 4: Applies investigative skills to solve problems on time.

(Challenge examples:)

Debugging performance issues

Resolving hardware conflicts

Meeting project deadlines

UN SDGs MAPPING AND ANALYSIS

UN SDGs Mapping

UN SDGs are 17 simple goals from the United Nations to improve the world by 2030, like better education or cleaner energy. For computer engineering, you connect your work to these goals to show how it helps people (e.g., *an app for learning ties to education*). Pick 1-2 easy goals to link.

Connect your internship tasks to UN SDGs. Start with: These goals include things like education (SDG 4), clean energy (SDG 7), or innovation (SDG 9). Pick the ones that match your work. Explain in plain words. Use a table:

For example,

Task/Assignment	Relevant UN SDG	Explanation/Link
[Made a learning app]	SDG 4: Quality Education	This app helps students learn online.
[Saved energy in device]	SDG 7: Affordable Clean Energy	Reduced power consumption by 20%

Table 1: Mapping of Internship Tasks to UN Sustainable Development Goals

Link to PLO 6: Considers how tech affects society, the environment, and ethics.

Technical Analysis *(Optional)*

Check your work with simple methods (e.g., *how fast your code runs, how well a system works*). Share what you learned (e.g*., better coding habits*) and skills gained (e.g., *using coding tools*).

CONCLUSIONS AND RECOMMENDATIONS

Conclusions

Summarize what you learned about tech trends (e.g., *AI, security*) and how it fits your future career (e.g., *becoming a software developer*).

Recommendations

Suggest practical ideas (e.g., *use a new coding tool, fix a system issue*). Keep it clear and doable.

Report Writing/Presentation

Make sure your report is easy to read with clear examples (e.g., *code or charts*). If presenting, plan simple slides like project steps or results.

Link to PLO 9: Communicates tech ideas well in reports or talks.
